## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election of Species I in the reply filed on 05 July 2007 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 4, 5, 9, 13 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 05 July 2007.

### *Claim Rejections - 35 USC § 101*

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.
4. Claims 10-12 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 10-12 are drawn to a computer program in general. "Functional descriptive material consists of data structures and computer programs which impart functionality when employed as a computer component." (MPEP 2106). When functional descriptive material is recorded on some computer-readable medium it becomes structurally and functionally interrelated to the medium and will be statutory in most cases since use of technology permits the function of the descriptive material to be realized. See Lowry, 32 F.3d at 1583-84, 32 USPQ2d at 1035.

### *Claim Rejections - 35 USC § 112*

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

Art Unit: 2132

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

7. Claim 1 recites the limitation "said setting information" in line 9. There is insufficient antecedent basis for this limitation in the claim.

***Claim Rejections - 35 USC § 102***

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

9. Claims 1-3, 6-8, 10-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Kadowaki, U.S. Patent No. 6,313,921. Referring to claims 1, 6, 10, Kadowaki discloses a print job personalization system wherein a personalization server receives a user ID and password of the user that issued the print job (Col. 18, lines 38-44). The personalization server authenticates the user based upon the ID and password (Col. 18, lines 58-66), which meets the limitation of a user authentication section that acquires ID information to identify each user from among a plurality of users, and performs user authentication based on said ID information. After the user has been authenticated, the personalization server extracts the personalizing information of that user, such as number of print sheets, available function list of the current user, font data of the current user, cover sheet image data of the current user, and form image data of the current user (Col. 18, line 64 – Col. 19, line 9), which meets the limitation of a setting information acquisition

Art Unit: 2132

section that acquires information for image formation associated with said users authentication by said user authentication section. This personalization information is used by the printer to complete the print job for the current user (Col. 19, lines 9-13), which meets the limitation of an image data creation section that creates image data for images to be formed on sheets of paper based on said setting information acquired by said setting information acquisition section.

Referring to claims 2, 7, 11, Kadowaki discloses that after the user has been authenticated, the personalization server extracts the personalizing information of that user, such as font data of the current user (Col. 19, lines 7-8), which meets the limitation of said image data creation section changes, based on said setting information, characters contained in said images.

Referring to claims 3, 8, 12, Kadowaki discloses that the personalization information includes a limit on the number of sheets that can be printed for the current user (Col. 19, lines 6-7), which meets the limitation of a restriction processing section that restricts prescribed processing for image formation based on said setting information acquired by said setting information acquisition section.
